

Professional statement

My interest in cybersecurity began when I was a child, using cheats in video games and installing homebrew software on my consoles. I loved the challenge of finding ways to break through the game's security and gain access to new features. This early experience sparked my curiosity about how technology works and how it can be used and abused.

As I grew older, I developed a passion for solving problems and finding creative solutions. I also became fascinated by the dark side of technology, and how it can be used to harm people and organizations. This led me to pursue a career in cybersecurity, where I can use my skills and knowledge to protect people and businesses from cyber threats.

I currently having a Bachelors and Masters degree in Computer Science, and I am also upskilling through the use of Courses, CTFs and hands-on projects to pivot into Cybersecurity. I have gained experience in a variety of cybersecurity domains, including penetration testing, vulnerability assessment, and incident response. I am also proficient in a variety of security tools and technologies.

I am a highly motivated and self-driven individual. I am always eager to learn new things and take on new challenges. I am also a team player and I am confident that I can work effectively with others to achieve common goals.

I am passionate about using my skills and knowledge to make the world a safer place. I believe that everyone deserves to be protected from cyber threats, and I am committed to using my skills to help organizations defend themselves from these threats.

I am confident that I have the skills and experience necessary to be a successful cybersecurity engineer or penetration tester. And, eager to contribute to the cybersecurity community and help protect people and businesses from cyber threats.
